

**Daisuke KURAMOTO** is a Deputy Councilor of CCS Project Department at the Japan Organization for Metals and Energy Security (JOGMEC).

His background is reservoir engineering, modeling and simulation with uncertainty analysis. He engaged in technical evaluation of both subsurface modeling and production forecast for Equity capital and Liability guarantees for oil and natural gas exploration and development projects. After gaining experience of exploration and production projects at a Japanese private oil company in Southeast Asia, he engaged in the optimization of shale (tight) oil and gas development in the research and development division.

He is in charge of JOGMEC's advanced CCS project with ship transportation and related works from 2024.
